Argentina opens team to 3D-printed prosthetics Published duration 8 July 2015 image copyright Julio Bonderas image caption This "lower limb" was designed in a basement workshop The Argentine government has launched a programme to develop 3D-printed prosthetics in hospitals and to create centres for their research and development. The objective is to reduce the country's dependence on imports in the medical sector. It has also been announced that the first Argentine firm to develop 3D-printing technology will join the competition. The aim is to create fully functional prosthetics, by printing the body part in three dimensions. The hand The programme was launched by Argentina's health minister Ginés González García and the government's innovation and technology institute (IDTI) at a ceremony in Argentina's capital, Buenos Aires, on Monday. image copyright Julio Bonderas image caption The researchers at the IDTI Under the new agreement, Argentina will fund a centre to be opened at the IDTI, which will develop the technology and build the industry that will mass-produce the devices. The project is one of a number to explore 3D-printing in the South American country, where there is a strong tradition of industrial manufacture, particularly in automotive engineering. The hand, the first of the prosthetics to be created, will be made by a local firm. The 82157476af
